

To repair collapsed pipes in an emergency can far exceed the costs of preventative maintenance.

Sewer and stormwater drains are assets that are often neglected parts of the overall asset management programme.

By carrying out investigation, inspection and survey work, a management programme can be implemented which will substantially improve the economic management of your assets.

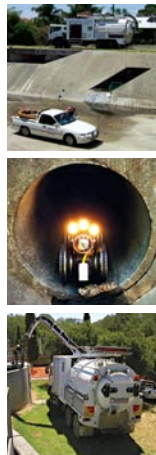

Preventative maintenance programmes will be designed to meet your budget and unique requirements.

They may consist of:

- closed circuit television inspection
- cleaning
- leak detection
- repairs
- replacement
- renovation (including re-lining)
- tree root inhibitor treatment
- or a combination of these

We offer you the peace of mind that comes with knowing that your assets are maintained to meet and/or exceed industry and legislative requirements.

*putting technology to work*

- Trenchless Technology
- Pipe Rehabilitation & Re-lining
- Sewer and Stormwater Cleaning
- Hydrojet & Vacuum Recovery Units
- Confined Space Entry Specialists
- Location of underground services
- CCTV inspections
